DeltaQuad

DeltaQuad

by Gonalo Atanásio | Aug 28, 2017

The **DeltaQuad** is a fully autonomous, commercial grade Vertical Takeoff and Land (VTOL) drone. It can fly up to 150KM distance and can achieve an endurance of almost 3 hours.

ABOUT

PX4 is an open source flight control software for drones and other unmanned vehicles. The project provides a flexible set of tools for drone developers to share technologies to create tailored solutions for drone applications. PX4 is hosted by Dronecode, a Linux Foundation non-profit.
